Garbage Reporting System

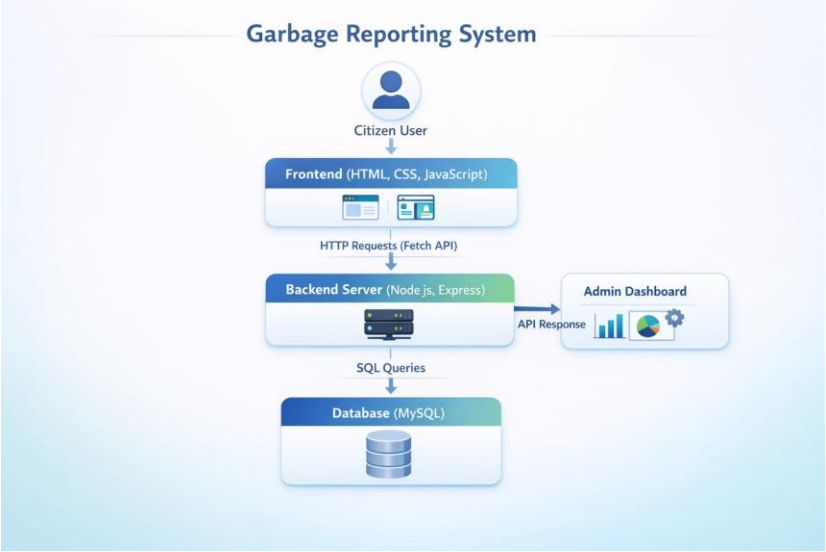
1. Introduction

This is a web- based application developed to help citizens report garbage issues efficiently. Users can upload images, provide descriptions and share their location.

2. Objectives

- To allow users to report garbage problems easily.
- To capture location-based data
- To provide an admin dashboard for monitoring
- To improve cleanliness and waste management.

3. System Architecture



We use 3-tier Architecture for this project

1. Frontend
    - Developed using HTML, CSS, JavaScript
    - Provides User Interface

- Collects user input

2. Backend
    - Developed using Node.js and Express.js
    - Handles API requests
    - Processes data and connects to database

3. Database
    - MySQL database
    - Stores reports and related data

4. **System Workflow**
    - User opens the application
    - Uploads garbage image
    - Adds description
    - Captures location
    - Clicks “Submit”
    - Data is sent to backend
    - Backend stores data in database
    - Admin views reports via Dashboard

5. **Technologies used**
    - Frontend: HTML, CSS, JavaScript
    - Backend : Node.js , Express.js
    - Database : MySQL
    - API : fetch API

6. **Admin Dashboard**
    - View all garbage reports
    - Monitor system activity
    - Manage reports

7. **Features**
    - Image Upload

- User-Friendly interface
- Real-time report submission
- Admin monitoring system

8. Conclusion

Garbage reporting system provides an efficient and user- friendly solution for managing waste- related issues. It connects citizens and authorities through a digital platform, improving response time and environmental cleanliness.
